

T45ES/T45US/T45E/T45U - T-Pieces

Description

T-pieces are ventilation system components for SPIRAL ducts and other fittings. The branch port and the branch duct can be of equal or smaller diameter than the main duct. The branch port can be angled at 15, 30, 45 or 60 degrees, or any other requested angle. The selection of various configurations allows building branches without an unnecessary increase of flow resistance.

T45E/US - T-piece with an EPDM gasket (air tightness class D) and a 45° branch port.

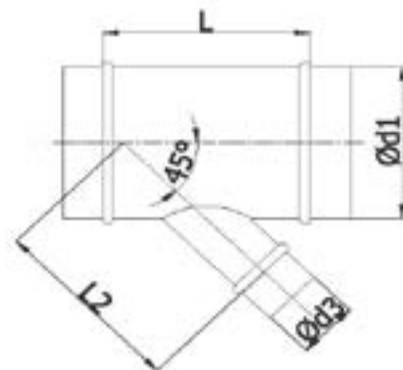

T45E/U - T-piece without a gasket, with a 45° branch

Available materials - Product code example
 T45-... -... - galvanized steel sheet

Product code example
 Product code: T45 - aaa - bbb
